What one sheet supplies, and what the check compares

printed corner coordinates

A · the neatline corner, and the graticule the sheet prints

GRID ...1,000 METER UTM: ZONE 48 (BLACK NUMBERED LINES)
PROJECTION.....TRANSVERSE MERCATOR
VERTICAL DATUM.....MEAN SEA LEVEL AT HÀ TIÊN
HORIZONTAL DATUM.....INDIAN DATUM 1960

B · the same sheet declares its datum

graticule_error compares A against control points read under B. A shared datum error is invisible.

The two operands are not independent: the printed graticule and the control points are expressed in the same declared datum, so a datum error cancels out of their difference.
