

What one sheet supplies, and what the check compares

printed corner coordinates

GRID ... 1,000 METER UTM: ZONE 48 (BLACK NUMBERED LINES)
PROJECTION.....TRANSVERSE MERCATOR
VERTICAL DATUM.....MEAN SEA LEVEL AT HÀ TIÊN
HORIZONTAL DATUM.....INDIAN DATUM 1960

B · the same sheet declares its datum

**graticule_error compares A against
control points read under B.
A wrong datum moves both.**

A · the neatline corner, and the graticule the sheet prints

The two operands are not independent: the printed graticule and the control points are expressed in the same declared datum, so a datum error cancels out of their difference.
